

# Save Your Bottom Line From the Strain of Heat Stress

## FEEDING SOY BEST® OR SOY BEST® "L" HELPS HEAT STRESSED COWS PRODUCE MORE

In university studies, heat stressed cows produced more milk when fed bypass protein with less degradable protein and adequate lysine. Up to "8.4 pounds more milk for evaporatively cooled cows and 5.3 pounds for shaded cows."<sup>1</sup>

**SOY BEST®**  
High Bypass Soybean Meal  
with Fresh Soy Gums

## The Science

This response can be explained by hepatic oxidation theory<sup>2</sup> and lysine status<sup>1</sup>.

Soy Best® High Bypass Soybean Meal with Gums is a great source of digestible bypass protein.

Soy Best® "L" contains the same digestible protein with rumen-protected lysine built right in. These products can help you get the same response that the scientists get: more milk during heat stress.
